TITLE						
Modified return roller bracket						
ARTICLE						
Described as a •Near Hit•, a return roller weighing 25kg fell approximately 10m to the ground, having worn through the roller™s supporting bracket. Steve Noot, a Plant Fitter at Midland Quarry Products™ Edwin Richards Quarry, came up with the bright idea of modifying the brackets by welding on steel ribs, thus effecting a ,prevention™ rather than relying on an underslung meshwork or netting ,cure™.
