TITLE	ഉ On Video
Crusher feed relay	
ARTICLE	
Cone crushers presented two problems for this West Belfast quarry: awkward access for housekeeping of manual clearance of frequent blockages on the other. The solution to the first lay in a mini-tracked dump to access the tail drum of the conveyor, scoop the spillage and carry it up and out of the tunnel. The block was caused by the discharge conveyor below the cone slowing or stopping. It was solved by fitting a ram hinged plate above the feeder. Now, when the tacho senses a drop in conveyor speed, the feeder is stop ram activated instantly, preventing material entering the cone.	er-loader able kage problem operated
