## TITLE

Health and safety induction testing

## ARTICLE

A problem was identified in trying to communicate the site requirements to some personnel.

To try and resolve this, a PowerPoint presentation was created. The presentation included photographs from the site to illustrate the messages. A voice-over commentary was also included to ensure a consistent explanation.

A multiple-choice test was used to confirm that employees had understood the inductions. Those receiving the induction are now better informed, and those giving inductions are also clearer about the aims and objectives of the induction and risks on site.
