TITLE

Guidance to Prevent Hot Meal Burns

ARTICLE

This major BCA document focuses on the hazards and associated risks of working in UK dry process pre-heater towers and on the areas under/around grate or cross bar cooling systems, posed by hot meal (the mixture of raw feed materials used in cement manufacture). Included in the recommendations are ways to establish better control over hot meal and ways to reduce the risk of hot meal incidents. As well as addressing hazard and risk; exposure reduction; cleaning & maintenance; major blockages; etc., there is a well illustrated PPE catalogue.
