Mixer safe working platform

## ARTICLE

### DESCRIPTION

Safe access underneath the mixer is required for specific tasks such as replacing wear plates within the mixer. This had normally been a time consuming and awkward task.

A portable working platform on runners that can be moved in and out of place very quickly was designed to address this issue. A standard operating procedure has been drawn up that details all safety precautions to be taken prior to instigating repairs.

### BENEFITS

Operatives now have safe working access and work is completed in a more timely manner.
