Concrete Construction Supervision

Submittals

Work shall conform to the applicable requirements of the Contract Documents. Prior to the start of any construction activity, the Contractor shall submit to the Engineer for review and approval all shop drawings, material samples, and other submittals required by the Contract Documents. The Contractor shall not proceed with any work that requires a submittal until the submittal has been reviewed and approved by the Engineer. The Contractor shall maintain a log of all submittals, including the date received, the date reviewed, and the disposition.

The Contractor shall be responsible for the accuracy and completeness of all submittals, regardless of any review by the Engineer. Any deviation from the Contract Documents shall be clearly identified in the submittal. The Engineer's review shall not relieve the Contractor of responsibility for errors or omissions in the submittal.

Material samples shall be delivered to the site or to a location designated by the Engineer. Samples shall be labeled with the material, source, and intended use. The Contractor shall provide adequate time for testing and review of samples before the material is incorporated into the work.

Shop drawings shall be prepared by a qualified person and shall be submitted in sufficient detail to show the arrangement, construction, and dimensions of the work. Shop drawings shall be submitted in electronic format unless otherwise directed by the Engineer.

- Stop anyone from working if they don't have the right, well maintained tools/equipment and PPE for the job.
