TITLE

Utilising drones to conduct pre and post blast surveys - Finalist

ARTICLE

Entry 21017 - Finalist - Fatal 2,3,4,5,6

When providing drilling and blasting services, EPC UK's shotfirers must accurately calculate the position of the boreholes and rock faces. This information is then used to determine the safe quantity of explosives which can be used in each hole.

By implementing drone technology within its operations, EPC UK has eliminated or reduced slips, trips and falls, potential contact with moving plant machinery, the risk of falling objects, and the need for manual handling of the heavy survey equipment.
