TITLE

Machine install Anchor Vertica

ARTICLE

Acheson & Glover have developed a new system for the construction of retaining walls. The machine install clamp and installation approach was developed because it was recognised that the construction of retaining walls, especially those that were large in height and being installed in narrow spaces, exposed builders to significant manual handling risks in the manipulation of blocks and often exposure to working at height risks.

The new Vertica® blocks can be quickly and efficiently moved from pallet to wall with minimal intervention – reducing build times and labour requirements and delivering a safer working environment.
