Do injury reduction initiatives work?

Phil Smith (HSE, Great Britain)
Introduction

- Policy background
- Partnership working – other examples
- Targeted Initiatives
- Key features and Success criteria
- Impact and Benefits
- Engagement model
Policy Background to Targeted Initiatives

• The ‘Revitalising Challenge’
• Regulator involvement
• Successes
• Other prompts
• Perceived gains
  ➢ Injury reduction
  ➢ Financial benefit
  ➢ Improved safety intelligence – “best practice”
  ➢ Improved collaboration
  ➢ Reduced attention form the regulator
Partnership working

• Safety & health covenants (Holland)
• Employers make a difference (Australia)
• Alliance Programme (USA)
• On-site Consultation (USA)
• Safety & Health Achievement Recognition Program (SHARP) (USA)
• Partnership (USA)
• Voluntary Protection Programme (USA)
Targeted Initiatives

• Prompts and pressures

• Setting targets
  ➢ Quantitative
  ➢ Qualitative
“The lead taken by the Quarries Sector has been noticeable. The sector was one of the first to adopt a targeted approach and their early successes appear to have influenced other sectors” (Review of targeted initiatives in the manufacturing sector (HSE Research Report RR620))
Key features
Recruitment and benefits:

- Recruitment procedure ✔
- Sign-up ✔
- Support ✔
- Branding ✔
- Awards ✔
- Conference ✔
- Networking ✔
# Key features

## Organisation and structure:

- Committee ✔
- Champion ✔
- Employer leadership/participation high
- HSE involvement high
- Union/worker involvement high
- Roles ✗
- Terms of reference ✔ high
- Resourcing high
Key features
Planning and implementation

- Planning ✔
- Action plans ✔
- Communications good
- Monitoring ~
- Reporting good
- Stats normalised ✔
Regulators Engagement Model

- Commitment
- Planning
- Implementation
- Review
- Re-engagement
Impact and benefits
What do they deliver?

- Measurable h&s improvements
- Vehicle for TAs to lead/actively support delivery of h&s improvements
- An apparently greater impact on h&s management than on safety culture and climate
- A reduction in injuries which may be greater than targets set by government
Conclusions

“…..there is evidence that partnership based targeted initiatives can help achieve significant improvements in health and safety……. sectors that have reasonable data have evidence of injury rates declining faster after the schemes start, and comparatively faster than manufacturing as a whole” (RR620)
